

Completing the annual PLACE assessment (Patient Led Assessment of the Care Environment) is often a time consuming and labour-intensive process. Our fmfirst® PLACE Mobile is a cloud-based software module designed specifically to make this process quicker, easier and far less prone to user error than pen and paper.

PLACE Assessment Made Easy

- Never use pen and paper again for the PLACE assessment
- Eliminate data duplication
- A single-point of data entry
- Most importantly – save NHS staff valuable time!

Subheader

Fully web-enabled and mobile compatible, fmfirst® Survey is designed to replace and simplify traditional time consuming and often error prone paper based systems. The ability to achieve fast and accurate data input enables more effective management control for organisations requiring the capture of key operational information. fmfirst® Survey can be used to support a wide range of topics, including but not limited to:

- Kitchen Conditions
- Infection Control
- Waste Management
- Fire Assessments

fmfirst® PLACE Mobile Key Features

Below are some key features of the fmfirst® PLACE Mobile applications:

Cloud & Mobile

- Compatible with iOS, Android and Windows devices
- Work offline; undertake audits without the need for permanent internet connectivity*

*internet connectivity required for the uploading/downloading of data.

Conditional Questions

Depending on answers given, subsequent questions can be set to change accordingly; this will help eliminate questions that do not apply to your current situation and vice versa.

Direct Data Upload

Once your survey has been completed, you have a choice of immediately submitting to the main EFM portal or saving to the device's cache to await completion or to be reviewed before submission.

Paper-free

Say goodbye to the pen and paper method! Have everything you need in one place and benefit from reduced data input and duplication error rates.

PLACE *Lite* Mobile

The PLACE *Lite* Mobile feature allows you to undertake regular, focused assessments throughout the year on a mobile platform as often as required. By focusing on areas of concern, Trusts can carry out year-round 'mini' assessments to measure improvements, focus resources and demonstrate standards compliance.
